# Lizards In An Evolutionary Tree: Ecology And Adaptive Radiation Of Anoles (Organisms And Environments)

## Synopsis

Adaptive radiation, which results when a single ancestral species gives rise to many descendants, each adapted to a different part of the environment, is possibly the single most important source of biological diversity in the living world. One of the best-studied examples involves Caribbean Anolis lizards. With about 400 species, Anolis has played an important role in the development of ecological theory and has become a model system exemplifying the integration of ecological, evolutionary, and behavioral studies to understand evolutionary diversification. This major work, written by one of the best-known investigators of Anolis, reviews and synthesizes an immense literature. Jonathan B. Losos illustrates how different scientific approaches to the questions of adaptation and diversification can be integrated and examines evolutionary and ecological questions of interest to a broad range of biologists.

## Book Information

Series: Organisms and Environments (Book 10)

Paperback: 528 pages

Publisher: University of California Press (February 9, 2011)

Language: English

ISBN-10: 0520269845

ISBN-13: 978-0520269842

Product Dimensions: 7 x 1.1 x 10 inches

Shipping Weight: 2.7 pounds (View shipping rates and policies)

Average Customer Review: 5.0 out of 5 stars 2 customer reviews

Best Sellers Rank: #658,523 in Books (See Top 100 in Books) #152 in [Books > Science & Math > Biological Sciences > Animals > Reptiles & Amphibians](#) #1687 in [Books > Science & Math > Biological Sciences > Zoology](#) #2037 in [Books > Science & Math > Biological Sciences > Ecology](#)

## Customer Reviews

“A rich compendium of information by an extraordinarily insightful biologist.” (Science (AAAS) 2010-01-04)  
“Lucid language and simplicity in writing [create] magic throughout the book.” (Very Poorly Written Review Environment And Ecology 2010-06-30)  
“This wonderful book will appeal to all ecologists and evolutionary biologists interested in the causes of species diversity.” (Trends In Ecology & Evolution 2010-07-06)  
“A must read for new researchers in the field.” (Evolution: Intl Journal Of

Organic Evolution 2010-07-08) "Very well-written. (Javier A. Rodriguez-Robles  
 Revista 2011-07-07) "Succeeds on all fronts. (Bioscience  
 2010-11-09) "Accessible, interesting, and broad in scope. . . . Indispensable. (Qtly  
 Review Of Biology 2011-12-01) "This apparent labor of love . . . will most likely become an  
 academic favorite that will be well used by many. (Qtly Review Of Biology  
 2012-01-26) "A labour of love . . . . [An] extremely well-researched and written book. (Austral Ecology / Emr 2011-06-10) "Represents a rich compendium of information by an  
 extraordinarily insightful biologist with a deep and broad understanding of the diversity of Anolis  
 lizards in the Caribbean. (Science (AAAS) 2010-01-01) "Extremely well-researched  
 and written book. (Austral Ecology / Emr 2011-06-13)

"In a book both beautifully illustrated and deeply informative, Jonathan Losos, a leader in  
 evolutionary ecology, celebrates and analyzes the diversity of the natural world that the fascinating  
 anoline lizards epitomize. Readers who are drawn to nature by its beauty or its intellectual  
 challenges; or both; will find his book rewarding."; Douglas J. Futuyma, State  
 University of New York, Stony Brook "This book is destined to become a classic. It is scholarly,  
 informative, stimulating, and highly readable, and will inspire a generation of students."; Peter  
 R. Grant, author of *How and Why Species Multiply: The Radiation of Darwin's Finches* "Anoline  
 lizards experienced a spectacular adaptive radiation in the dynamic landscape of the Caribbean  
 islands. The radiation has extended over a long period of time and has featured separate radiations  
 on the larger islands. Losos, the leading active student of these lizards, presents an integrated and  
 synthetic overview, summarizing the enormous and multidimensional research literature. This  
 engaging book makes a wonderful example of an adaptive radiation accessible to all, and the lavish  
 illustrations, especially the photographs, make the anoles come alive in one's mind."; David  
 Wake, University of California, Berkeley "This magnificent book is a celebration and synthesis of one  
 of the most eventful adaptive radiations known. With disarming prose and personal narrative  
 Jonathan Losos shows how an obsession, beginning at age ten, became a methodology and a  
 research plan that, together with studies by colleagues and predecessors, culminated in many of  
 the principles we now regard as true about the origins and maintenance of biodiversity. This work  
 combines rigorous analysis and glorious natural history in a unique volume that stands with books  
 by the Grants on Darwin's finches among the most informed and engaging accounts ever written on  
 the evolution of a group of organisms in nature."; Dolph Schluter, author of *The Ecology of  
 Adaptive Radiation*

Awesome book!

This book was just awarded the Daniel Giraud Elliot Medal by the National Academy of Sciences. The NAS press release states: "Jonathan B. Losos is recognized for his novel and penetrating evolutionary studies of adaptive radiation in vertebrates, notably his comprehensive study of anolis lizards in tropical America, as summarized in his recent book, *Lizards in an Evolutionary Tree: Ecology and Adaptive Radiation of Anoles*." (to find the press release, search on National Academy of Sciences awards").
