Spychips: How Major Corporations And Government Plan To Track Your Every Purchase And Watch Your Every Move

Synopsis

Winner of the Lysander Spooner Award for Advancing the Literature of Liberty As you walk down the street, a tiny microchip implanted in your tennis shoe tracks your every move; chips woven into your clothing transmit the value of your outfit to nearby retailers; and a thief scans the chips hidden inside your money to decide if you're worth robbing. This isn't science fiction; in a few short years, it could be a fact of life. *Spychips* takes readers into the frightening world of Radio Frequency Identification (RFID). While manufacturers and the government want you to believe that they would never misuse the technology, the future looks like an Orwellian nightmare when you consider the possibilities of surveillance and tracking these chips embody. Combining in-depth research with firsthand reporting, *Spychips* reveals how RFID technology, if left unchecked, could soon destroy our privacy, radically alter the economy, and open the floodgates for civil liberty abuses.

Book Information

Paperback: 304 pages

Publisher: Plume; Reprint edition (September 26, 2006)

Language: English

ISBN-10: 0452287669

ISBN-13: 978-0452287662

Product Dimensions: 5.5 x 0.7 x 8.4 inches

Customer Reviews

Winner of the Lysander Spooner Award for Advancing the Literature of Liberty "This is the first, and maybe the loudest, popular book on a crucial technology of our times; a masterpiece of technocriticism." —from the foreword by bestselling author Bruce Sterling "One of the best privacy books in many years... The privacy movement needs a book. I nominate *Spychips*." —Marc Rotenberg, Executive Director of the Electronic Privacy Information Center (EPIC) "The book makes a very persuasive case that some of America's biggest companies

want to embed tracking technology into virtually everything we own, and then study our usage patterns 24 hours a day. It's a truly creepy book and well worth reading." — Hiawatha Bray, The Boston Globe — "Provocative... Albrecht and McIntyre have a knack for finding information, and developing sources that make them the envy of investigative reporters." — Chicago Sun-Times "Paints a 1984-ish picture of how corporations would like to use RFID tags to keep tabs on you." — The Associated Press — "A chilling story about an emerging future in which spychips run amok as Big Brother and Big Shopkeeper invade our privacy in unprecedented ways." — Chicago Tribune

Dr. Katherine Albrecht is the founder and director of CASPIAN, an international consumer group. Dubbed the "Erin Brockovich" of RFID by Wired magazine, she is one of the leading voices for privacy in today's fast-changing, high-tech world. Katherine holds a doctorate in education from Harvard University. Liz McIntyre is an award-winning investigative writer with a flair for exposing corporate shenanigans and bureaucratic misdeeds. She serves as CASPIAN's communications director and has been the master strategist for many of the organization's most successful media campaigns.

I have followed Katherine Albrecht for years and she is a very intelligent lady who has amassed a tremendous amount of information about electronic surveillance and this is a must book for anyone who is concerned about it. Major corporations and governments have at their disposal technological means to completely monitor and control everything in our lives far beyond what most people know about and this book details it. It will scare you and even might terrify you, but we must all be aware of what is going on. 5 stars for Katherine Albrecht and her co-author Liz McIntyre.

Informative.

You can go pretty far down the rabbit hole by reading stuff like this. However, it is a good tool to open peoples eyes toward how quickly and easily our personal liberties, to include privacy, can be eroded. I read this years ago and made the mistake of loaning it out, so this is my second copy. Definitely worth having in your library.

Educate yourselves on the emerging control grid or be content with your sheering. Ba ba ba

Very interesting material-with all documentation backed up. Makes you more alert as to who wants to know more about you and what they will do with that information. We are going to lose our privacy whether we like it or not. We should find ways to deflect the governments ability to know our every move and thought. It has changed my thoughts on how I spend money and where. This book is a fast read.

I think we need to let people know what's going on. I have family members that are in law enforcement and they love the idea of spy chips to get those scrum bags trying to steal merchandise. But I know they don't think it's to spy on the people of this country. When it comes to our dollars, we can make the difference. People in the USA don't think they are doing any thing wrong, they won't spy on me. The big picture is our constitution along with our rights as citizens are going to be erased. So good luck if you don't prepare.

This book lays the ground work of what's to come. In the near future, the whole world's products are going to be accounted for with it's specific number. There goes our freedom because what we wear, where we go, and what we buy will tracked. There will be no place to hide. A chilling reality of the mark of beast's system prophesized in the Bible becoming a reality in front of our very eyes.

I am over half way through the book and the information is plausible and frightening. I believe that all Citizens of the United States ought to read this book and other information like to understand how intrucive and destructive Governments can and will be given the opportunity. There are far fewer risks to our survival as a Free People by putting major emphasis on the Individual and not the Government, in any form, but particularly the larger more anonymous forms, over the risks encountered with people doing what people do in their own communities. God Save the Constitution of the United States! (Or whom ever or what ever you put your faith in).
