## Customer Reviews

In this book Roger Lewis outlines the most important considerations in pursuing a career as an architect. I have always loved architecture, and have read extensively on the subject at the level of an interested amateur. When I was preparing for college in the 1980s, I wanted to pursue a five year professional architecture degree, but was dissuaded when I received a full scholarship in biology. That was an unfortunate decision in the long run, although I have been doing well professionally until recently, when my career field went into steep decline. I never forgot my interest in the subject, and while considering a mid-career occupation change, I have carefully considered returning to school and attempting to be admitted to a 3-4 year M.Arch. program. I am very glad that I read this book (and several others) prior to embarking on a career in architecture. The book is very honest about the rigors of school and the relative lack of money to be obtained in the field, unless you are uncharacteristically brilliant in design (and in selling your services). People like Michael Graves are definitely the exception to the rule. I appreciated Lewis' candor, and honestly the book has made me reappraise my desire to pursue this particular career transition. He repeatedly emphasizes that you should become an architect because of a love of architecture. I also have to be practical in considering that between three or four very expensive years of school and at least three years as an underpaid intern, it is at least seven years to becoming a licensed architect for me, and at this stage of my career that is difficult. Not impossible, but very difficult. I have not decided what professional avenues to pursue yet, but I will always appreciate the practical nature of this book in educating me about an architectural career. This is the most important book a prospective architect can read prior to committing to the arduous path leading to licensure.

my son loves it

Great book. I am using it as a teaching tool for architecture and interior design students to prepare them for the careers.

a book

'Architect?' is a useful, practical guide to the field of architecture and the process of becoming an architect. It thoroughly notes all the obstacles and difficulties involved in becoming an architect. It's a brisk dose of reality, and at times seems mired in these difficulties. The author fails to note that many of obstacles are common to many other professions and graduate education programs (including things like difficult professors, low pay, and the need to juggle many tasks outside of your original love - design). It's a useful read for anyone with romanticized notions of architecture. But just keep one thing in mind - all life choices are hard, and there are very few creative professions that don't require the ability to stand out and overcome obstacles.

The book was published awhile ago and doesn't acknowledge some of the newer architecture schools. Additionally the author is not an architect, but did go to architecture school, and then became an architecture critic. The book is comprehensive and objective, but there are better books on the subject. Take this with a grain of salt as I am not an architect either, but am looking into becoming one. Finally this book says in 150 pages, what it could have said in 50. Some good information that shouldn't be overlooked, but.....

I have now been in the work force for 6 years having mostly worked in, now defunct, internet shops. Now I have a sterile job as a financial analyst working for a HUGE company. After being afraid to pursue my dreams again (after an earlier attempt in my mid-20's withered away...), I am seriously looking to get my masters in architecture although I have a liberal arts degree. I first read Cesar Pelli's "Observations" which inspired me. So I was afraid to get into this book knowing that many reviews here and in newsgroups claim it's harsh or may change your mind about architecture. Actually, it has strengthened my desire to pursue architecture. I won't be making as much money as I do now in my somewhat laid-back job, but there are other considerations far more important to me than working just for money. People who do not wish to be challenged to their fullest or work harder than they ever have worked before should not pursue such careers medicine, law, computer science, etc - architecture is no exception. I already knew architects are rarely rich, work very hard,

go through a very tough education, and work in a very competitive environment. None of that came as a shock from reading this. Basically, I can conclude from this book that the field should only be pursued if one LOVES architecture despite all the difficulties. One can dislike medicine or law and not be as discouraged since the money can provide some comfort, but the same is not true of architecture. Even if this book does talk many out of pursuing architecture, it's better that it tells it like it is. I'd rather know the good and the bad before making a decision. By the way, this book is not nearly as negative as some here have pointed out.

I like how it gives good information and advice for someone like myself who was considering the profession. It gave me an excellent idea of what to expect of the profession. I just wish I had listened even more carefully to his advice when reading the book, especially the advice about taking some time off between highschool and going to school to be an architect. One thing future architects need to realize is that if you are an architecture major, you will have no free time whatsoever outside of your classroom studio. So if you have any wild and crazy side to you that just wants to party, I suggest getting that out of your system first and then go study architecture. If there is any traveling you really want to do, do it first. Cause architects work hard and on average don't even make that much money. Anyhow this book contains other useful information for those who are certain they want to be architects as well. It gives you an excellent idea of what to expect, the types of jobs you will be doing, the skills you will need, ect..
