Customer Reviews

Wow. I would have been nowhere without this workbook. It went along with the textbook perfectly. We only had a midterm and final in my class so I think studying the workbook and having to write it out really helped replace those quizzes that we did not have in class. Each workbook chapter is very long and has a number of different activities such as filling in the blanks, changing words to correct sentences, different scenarios dealing with requisitions and tests, types of activities which make you think and figure out which tube goes to what test and why. The only downside about this book is that there is no answer key so you can't really tell if your answers are correct unless you ask the professor, or do what I had to do, which was wait for the homework to be graded. Besides that,

excellent book and extra work to really drill the stuff in your brain!

The book definitely touches on each of the chapter from the manual. Cant use it to study from because there is no answer key so you will be stuck if you want to know if you are right or wrong. I would have given it five stars if there was a answer key.

ok

Very helpful in helping the information "stick". Some errors in printing (i.e. Weird spacing for answers, incorrect formatting on some of the medical term exercises)

I like it ok but you need the textbook for it to help you. I think it would be nice if that is the textbook you use. I will be returning it because it's just not what I thought it was. sorry

Didn't use much in my Phlebotomy class but when I did go through it on my own time it helped a lot of details that weren't explained in class.

great price and super fast shipping!

I bought this for my granddaughter, who is taking a college class. I'm hoping it will help her to ace the class.
