A Handbook Of Tropical Soil Biology: Sampling And Characterization Of Below-ground Biodiversity

Synopsis

This practical handbook describes sampling and laboratory assessment methods for the biodiversity of a number of key functional groups of soil organisms, including insects, earthworms, nematodes, fungi and bacteria. The methods have been assembled and the protocols drafted by a number of scientists associated with the UNEP-GEF funded Conservation and Sustainable Management of Below-Ground Biodiversity Project, executed by the Tropical Soil Biology and Fertility (TSBF) Institute of the International Center for Tropical Agriculture (CIAT). The methods provide a standardized basis for characterizing soil biodiversity and current land uses in terrestrial natural, semi-natural and agroecosystems in tropical forests and at forest margins. The aim is to assess soil biodiversity against current and historic land use practices both at plot and landscape scales and, further, to identify opportunities for improved sustainable land management through the introduction, management or remediation of soil biota, thus reducing the need for external inputs such as fertilizers and pesticides. The book also contains extensive advice on the handling of specimens and the allocation of organisms to strain or functional group type. Published with TSBF-CIAT, CTA, UNEP and GEF

Book Information

Paperback: 256 pages

Publisher: Routledge; 1 edition (October 2, 2008)

Language: English

ISBN-10: 1844075931

ISBN-13: 978-1844075935

Product Dimensions: 9.4 x 6.6 x 0.8 inches

Shipping Weight: 1 pounds (View shipping rates and policies)

Customer Reviews

'This book has been long-awaited...Written by top field researchers, it is almost all-encompassing and of very high quality. It will be the standard handbook for students and practitioners for many years.'-Lijbert Brussaard, professor of soil biology and biological soil quality, Wageningen

University, The Netherlands 'This practical manual, written by an accomplished and international team of experts, will help us to unlock further the secrets of the rich tropical soil biota and the generation of tropical soil fertility. It will thereby help us in the conservation and sustainable management of one of the Earth's most valuable assets.' -Goetz Schroth, Conservation International 'A valuable practical teaching resource suitable for universities and research institutions undertaking laboratory and field level studies in tropical soil biology, agriculture and environment. This book will ease a critical shortage of practical handbooks in soil biodiversity in Africa and other tropical areas; a must for teaching and research institution libraries.' -Sheunesu Mpepereki, professor of soil science, University of Zimbabwe '[A] great resource for teaching' -Experimental Agriculture 'Practical handbook' Biotechnology, Agronomy Society and Environment 'An extremely valuable companion volume which will have wide appeal outside the tropics as well as within them.' -David L. Hawksworth, Biodiversity and Conservation

Fatima M. S. Moreira is associate professor of soil microbiology and biochemistry in the Soil Science Department, Federal University of Lavras, Brazil. E. Jeroen Huising is a senior scientist at the Tropical Soil Biology and Fertility Institute of CIAT, Nairobi, Kenya. David E. Bignell is professor of zoology, Queen Mary University of London, UK and visiting professor, Institute for Tropical Biology and Conservation, Universiti Malaysia Sabah.
