Where to start singing the praises? How about the request that anyone who finds an inaccuracy or misprint contact the publisher, with an address for that right next to the "this book is lost, return it to:" page? Everything from Algebra to Zinc sheeting gauge tables is in this book, which fits in the space from the pad on the base of my thumb to the end of my little finger in length and the width of my hand when closed. Its about as thick as the end joint on my index finger, and it's packed with stuff you'll need at some time or other. Need to identify a fastener or bolt? Done. Want to know how much dirt is in that pile over there (or conversely, how much of your driveway will be lost to x cubic yards of dirt)? Done. Log tables (remember them)? Done. Want to learn to tie a bowline and a sheepshank? Done. Need the melting point of lead? done. Need to know exactly how many "6 inch wide" boards you'll need for your deck that you sized in real inches? Done. Time zones? Done. Area codes? Done. Military ranks so you don't look like an arse when you meet a person on active service? Done. Need to know what day your wife's birthday will fall on every year from now 'til next muckspreading? Done. Take the stuff you used to get in the ends of diaries when we were kids. Add all the stuff you find in the appendices of Big-ass Dictionaries. Add in the actually useful stuff from the old OU Science Data Book. Now pack it all in a pocket-sized book. This will bring out the inner

eight year old in everyone and is about as useful as a Swiss Army Knife welded to a Leatherman Wave. And it is all organized into sensible sections. If you need something mathy, you'll find it in a "math" section. Need a day/date and you'll be wading into the perpetual calendar. There's sections on carpentry, computers, cars. If you walk into a lamppost while reading, there's a section on first aid, and once properly recovered you'll be able to identify various properties of the post by looking up the metals section. Six stars. [EDIT 5/13/16] Good news! There's now a desk-sized version for people who lack pockets, prefer to browse at a desk or are fed up with being laughed at by those who feel that when it comes to reference books, size matters. [/EDIT]

The range of facts in this tiny 860-page book will blow your mind. Amazing and fun, especially if you're techno, mechanical, or scientific. You might actually use it. Either way, it's hard to put down. A fun gift for the right person, including possibly yourself. Keep it in the guest bathroom. This 4th Edition is expanded (by 12%), updated, and better indexed. But it's still 3.2" x 5.4" x 0.9". Reviews of the previous Pocket Ref - 3rd Edition are the highest I've seen for anything on . (You can also "Look Inside" the 3rd edition on .) Holy crap this is awesome!! I work in maintenance and am often expected to be able to fix everything. I like muscle memory or the ability to do things I know or have done before. This book is great! Do I need to know the specific gravity of Igneous rocks? I know it with this book. Others will say this has small print. True, it is pocket sized so what would you expect. I am soon to purchase the desk sized book. Pumps and Tanks, Trigonometry, Planetary information, metal strength markings

on screws, weather information, electrical wiring, and concrete strength are some of the items covered so far. Just buy this and you will find it useful

Where to start singing the praises? This book is a must have for anyone who needs to know anything! Google has nothing on this book! When your in the garage, or deep in a project, just reach for your pocket ref. I have used this book so often since I bought it back in 2008, that the pages are a bit rough. Everything from Algebra to Zinc sheeting gauge tables is in this book, which fits in the space from the pad on the base of my thumb to the end of my little finger in length and the width of my hand when closed. Its about as thick as the end joint on my index finger, and it's packed with stuff you'll need at some time or other. Need to identify a fastener or bolt? Done. Want to know how much dirt is in that pile over there (or conversely, how much of your driveway will be lost to x cubic yards of dirt)? Done. Log tables (remember them)? Done. Want to learn to tie a bowline and a sheepshank? Done. Need the melting point of lead? done. Need to know exactly how many "6 inch wide" boards you'll need for your deck that you sized in real inches? Done.
