Equine Color Genetics

Synopsis

Equine Color Genetics, Fourth Edition presents a detailed examination of the color variation in horses and donkeys and the genetic mechanisms that produce color variations. Thoroughly covers the basic colors in horses, including bay, chestnut, black, and brown Details the genetic basis of the colors built from the basic coat color, including dilutions and white patterning Provides an explanation of genetic mechanisms that determine coat color Presents a thorough revision and update, including new advances in molecular genetics, biochemistry, molecular mechanisms, genetic loci, coat colors before domestication, and more Offers a new introduction describing the principles of genetics and genomics research to help outline how knowledge is discovered and to assist the reader in understanding concepts covered in the book

Book Information

Hardcover: 352 pages

Publisher: Wiley-Blackwell; 4 edition (August 7, 2017)

Language: English

ISBN-10: 1119130581

ISBN-13: 978-1119130581

Product Dimensions: 6.8 x 0.8 x 9.7 inches

Shipping Weight: 2 pounds (View shipping rates and policies)

Customer Reviews

Equine Color Genetics, Fourth Edition presents a detailed examination of the color variation in horses and donkeys and the genetic mechanisms that produce color variations. Offering information on how to tailor breeding programs to maximize desired color outcomes, the text bridges the gap between the scientific and lay communities without ignoring the intricate and complex details involved in horse and donkey color genetics. The Fourth Edition has been extensively updated and revised, providing new information on advances in knowledge of the genetic loci and molecular mechanisms involved and excellent visual aids to present difficult concepts. Many of the color photographs have been updated to give a greater depiction of the coat color variation that exists in

horses and donkeys, and a new glossary of terms aids in the understanding of the complexity of the molecular genetics. Equine Color Genetics is an essential reference for anyone wanting to understand coat color and the genetic basis for color variation in horses and donkeys. Key features Thoroughly covers the basic colors in horses, including bay, chestnut, black, and brown Details the genetic basis of the colors built from the basic coat color, including dilutions and white patterning Provides an explanation of genetic mechanisms that determine coat color Presents a thorough revision and update, including new advances in molecular genetics, biochemistry, molecular mechanisms, genetic loci, coat colors before domestication, and more Offers a new introduction describing the principles of genetics and genomics research to help outline how knowledge is discovered and to assist the reader in understanding concepts covered in the book

The authors D. Phillip Sponenberg, DVM, PhD, is Professor of Pathology and Genetics in the Department of Biomedical Sciences and Pathobiology at the Virginia-Maryland College of Veterinary Medicine in Blacksburg, Virginia, USA. Rebecca Bellone, PhD, is Associate Adjunct Professor in the Veterinary Genetics Laboratory and Department of Population Health and Reproduction at the University of California-Davis in Davis, California, USA.
