this is a very handy, high quality, laminated guide with outstanding photos to make easy identification possible. reasonably priced and makes a great gift for those living in snake country. I actually found this in a brick and mortar but then promptly went to to order more. I've never seen a better snake guide. it's organized with all venomous snakes in one section which makes rapid identification easy. easily fits in a pocket if hiking. I really can't praise this enough. this is a must have item

-Disclaimer- (I am not a snake person)I purchased this for my roommate who is definitely a snake lover. She moved to north Georgia from Florida and was disappointed that her Florida snake guide

was not accurate for this area. I located the guide by the same authors as her other one. She loves it! The lamination makes it very durable. Her Florida guide has been well loved and is still holding up great. Provides detailed pictures and great info.

We see a lot of snakes during our frequent trips to the Francis Marion Forest year-round, so we keep this handy guide in our car. The photos are good, and it's an accurate and easy to use reference. My husband was able to help a coworker identify a copperhead and settle an argument with this guide. The coworker insisted he saw a non-venomous corn snake, but my husband whipped out his guide and convinced him he saw a copperhead. A good investment.

My family often goes on hikes in the mountains in Georgia but we know nothing about snakes. Every once and a while we would see one while we were on the trail and didn't know if it was poisonous or not. This pullout was a great solution. It is laminated, about 4 pages with color pictures. Now we just throw this in our backpacks and pull it out any time we see a snake. It is fun for the boys to try to identify the type of snake. Two thumbs up.

I use this to quick teach children about snakes. Snakes keep the balance, eating vermin, insects and other snakes.

Bought as a gift for my mother. She keeps it on the porch! Since it is laminated, it holds up well being outside in a screened porch! Very accurate.

Great reference. We have snakes in our condominium complex, and this helped prove that most were harmless. Highly recommended for quick reference. Also bought the book Amphibians and Reptiles of Georgia for more info, and recommend it too.

what I was looking for to identify snakes on the property
