Customer Reviews

We were already familiar with using memory palaces, but had run into some practical problems. Mr. Metivier's approach helped us resolve those. We had terminating locations and path crossing that was confusing us. Also, it is important to note that the author provides links to free worksheets, videos, and answers your questions by email. He seems genuinely interested in people mastering the skill.

A waste of time, more of a disguised sales pitch than a helpful learning Latin book. Frustration sets in waiting for this guy to get to the point.

The memory techniques are not unique to learning a language. They may make it easier for some,

but may not suit everyone. The technique requires an immense outlay before any payoff, but once the foundation is laid, learning IS facilitated.

Not convinced by the memory palace of the mind approach, even though Cumberbatch's Holmes lives in one. Maybe my memory palace is in need of the team from This Old House.

This book uses memory tricks I learned from a two bit carnie hypnotist, It only works if you are willing to waste a lot of time.

This book did nothing to help me learn Latin.I did read it and came to the conclusion it is one persons idea of how to memorize something.It is a very complicated method that requires study in it's own right .Not what I wanted at all.

Am interesting introduction to a challenging field.

You create various "buildings" with "rooms" and place the words in the rooms with various memory tricks. You either love this stuff or find it unhelpful. I do better with flash cards, or pictures are even better. I found it overwhelming to find buildings for all 26 letters of the alphabet with their various rooms and furniture!Wikipedia The Method of loci (loci being Latin for "places"[1]), also called the memory palace or mind palace technique, is a mnemonic device known to the ancient Greeks and. In this technique the subject memorizes the layout of some building, or the arrangement of shops on a street, or any geographical entity which is composed of a number of discrete loci. When desiring to remember a set of items the subject literally 'walks' through these loci and commits an item to each one by forming an image between the item and any distinguishing feature of that locus. Retrieval of items is achieved by 'walking' through the loci, allowing the latter to activate the desired items
