# Exploring Creation With General Science, 2nd Edition (Textbook Only)

## Synopsis

Designed to be a student's first systematic introduction to the sciences, this course includes a history of science, the scientific method, and how to design an experiment. Subjects covered include simple machines, archaeology, geology, paleontology, biology, and human anatomy and physiology. Many hands-on experiments are included, all using basic household items. The second edition of the includes more color and higher-quality illustrations, access to additional online resources for more advanced learners, and an appendix of review questions covering the entire course. The high-quality hardcover student text contains all student material, study questions, laboratory exercises, and module study guides with color photos and illustrations. This product is the textbook only. You will also need a solutions-and-tests manual to complete this course.

## Book Information

## Customer Reviews

The next time you start to doubt your ability to teach the upper level sciences at home simply visit the Apologia website or open one of their amazing textbooks and read. With engaging text, easy-to-implement household lab science experiments, and tests to capture the learning, upper-level homeschool science education is within your grasp. Apologia Science really does make it that easy. --Homeschool Reviews for You This science book doesn't read like a science textbook. Instead, the author invites the reader to join him in a joyful, wonder-filled exploration of the intricacies of Creation. That's my kind of learning! --Eclectic Homeschool Online Dr. Jay L. Wile is an engaging and witty writer. This is not a dry, dreary, mind-numbing science curriculum. . . . I wish Dr.

Wile had been writing textbooks 25 years ago! I have learned more from these two books than I learned in six years of middle school and high school science. --The Old Schoolhouse Magazine

Jay Wile fell in love with chemistry when his parents bought him his first chemistry set. Many stink bombs and a few explosions later, he was hooked! He attended the University of Rochester to study chemistry and, while there, became fascinated with nuclear chemistry, eventually earning a PhD in that field. For several years, he did research under the auspices of the Department of Energy and the National Science Foundation while serving as an assistant professor of chemistry. Dr. Wile has won many awards for excellence in teaching and research. In addition, he has authored or co-authored nine books.

My daughter is using this for 7th grade science in her co op. I really like the program and we will continue it through the other books.

We have always used Apologia but this is the first year for a more advanced science. My son is only in 5th grade but we are using this text (which states it's for 7th grade). I have had no difficulty with him understanding or following along with it! He loves it, especially all the experiments. I highly recommend this book to anyone who wants a complete science curriculum with a Christian focus!

We were looking for something with more "umph" to it! THIS IS IT! My son said he wanted more science experiments and this is definitely the perfect curriculum for that. Very well written and made for kids to work independently. It is a lot of reading but that's to be expected of a jr high curriculum. I think this would be a hard curriculum to use if you don't get the journal to go with it though!

Uses for a home school science group. Great book teaches step by step lots of experiments. Easy to understand.

Bought these on behalf of family. They love the Apologia books for the versatility and ability to have self-directed learning across multiple age/grade groups.

We have been using this for two weeks now. My son loves the experiments with common household items and enjoys science now. I love that God's word is built into each lesson.

Extremely pleased with textbook purchase! Arrived quickly and as described.

Great book
